## **Lyngdorf Audio launches new digital streaming amplifier TDAI-2210**

**Skive, Denmark** – May 15th, 2025 – Lyngdorf Audio launches the latest addition to the company’s streaming amplifier range, the Lyngdorf TDAI-2210. It marks the middle of three TDAI models and features a new color touchscreen, the company’s unique digital amplification, and the renown RoomPerfect™ room calibration.

### **Lyngdorf Audio’s newest streaming amplifier**

The TDAI-2210 is the newest integrated streaming amplifier by the company. With various digital inputs including USB-C, HDMI 2.1, analog inputs, optional modular upgrades, an integrated music streaming player and the unique RoomPerfect™ calibration, the TDAI-2210 is ready for any kind of audio system. The amplifier delivers 2 x 210 watts @ 4 Ohms to drive even the most demanding loudspeakers effortlessly.

### **New color touchscreen with smooth glass surface**

The touchscreen and user interface makes it easier than ever to control a Lyngdorf amplifier. It guides first-time setup, helps to explore all features, allows customization, and makes music streaming more convenient. Lyngdorf engineers took particular care to select the screen: a silky-smooth real glass surface for the best fingertip feel, less visible fingerprints, and a vivid picture.

### **Digital amplifier technology and best-in-class volume control**

TDAI stands for True Digital Amplifier Integrated. The amplification is 100% digital, with no analog conversion right until the speaker outputs. The digital signal powers the speakers directly, while the volume wheel adjusts the gain in the output stage. This unique Lyngdorf solution eliminates several analog components and signal paths, which are a source of noise, hiss, crosstalk, and distortion. It ensures the best sound quality at all volume levels and the most uncolored sound.

### **Better sound at home with RoomPerfect™**

RoomPerfect™ is one of the most sophisticated solutions for adapting speakers to the room. The calibration addresses room acoustic issues like exaggerated bass, lack of bass, uneven bass, diffuse imaging and sound staging. RoomPerfect™ addresses these issues in the digital domain and allows speakers to perform at their best, without linearizing the sound. It is also very easy to use with the Lyngdorf app - no computer, software, or calibration knowledge required.

### **Designed, assembled and 24h-tested at Lyngdorf Audio, Denmark**

The TDAI-2210 will be assembled to the highest quality standards at Lyngdorf Audio in Denmark. Each unit must pass a 24-hour test with all inputs and outputs used, and both amp channels driven under load, measured to meet all specifications. This ensures highest performance, quality, and reliability.

**The TDAI-2210 worldwide launch is at the HIGH END 2025, May 15-18. Production will start in the coming months at Lyngdorf Audio in Skive, Denmark, with the first products available in September 2025.**

## Statements from the team

*“With the TDAI-2210 we have yet again made a leap in technology. With a new updated hardware platform to support a smooth user interface experience, and more audio DSP processing power, Lyngdorf Audio remains ahead of the game.”*

*Thomas Birkelund, Lyngdorf Audio CEO and CTO*

*“Since we discontinued the TDAI-2170, demand for a successor has been strong, and expectations even stronger. Now it's here – and the wait has been worth it. We wanted the new product to be state of the art in every aspect. And it is – ready for everything.”*

*Anker Haldan, Lyngdorf Audio CCO*

*“The new TDAI-2210 is 100% recognizable as a Lyngdorf amplifier. It showcases the essence of Lyngdorf Audio: A pure and timeless design, ease of use, powerful digital amplification with our trademark lossless volume control, and of course RoomPerfect, which ensures that every customer's loudspeaker sounds best in an actual room.”*

*Roland Hoffmann, Lyngdorf Audio Product Marketing Director*
