

## **Steinway Lyngdorf releases new apps for amplifiers, processors and music streaming**

**Skive, Denmark** – August 1, 2025 – Steinway Lyngdorf releases completely new iOS and Android apps to control Lyngdorf and Steinway & Sons amplifiers and processors from a smartphone or tablet:

### **My Lyngdorf App My Steinway Lyngdorf App**

They are the smartest way to access all settings, help setting up a new device, customize the user interface, calibrate the sound system, and stream music. With an icon-based screen and intuitive touch, tap, and slide functions, operating a Lyngdorf or Steinway & Sons system is now easier than ever.

### **The most convenient remote control for everyone**

Every Lyngdorf amplifier and processor has a wealth of functions and features. Even though a conventional remote control has the advantage of physical buttons, and some functions are also accessible over the unit's front display, an app allows to explore all functions in the most convenient and visual way. The graphical, icon-based layout has been specifically designed as an interactive, easy-to-understand interface, with several accessibility enhancements such as larger text, dark / light mode, and Apple VoiceOver.

### **Customize a Steinway Lyngdorf device – and even the app itself**

Apart from setting up and controlling a Steinway Lyngdorf amplifier or processor, the new apps also allows user customization. Functions such as deleting unused inputs, renaming favorite inputs, selecting RoomPerfect modes, changing screen brightness and display modes, and modifying or creating custom Voicings all becomes intuitive and easy. Even the app home screen layout on the smartphone or tablet itself can be customized by the user, for example adding or removing app features and icons, and prioritizing often used functions.

### **Intelligent web radio**

The most used function of a streaming amplifier is to interact with music, streaming services, and web radio. The new apps provide the common information about song, artist, and artwork, but also about the sound quality, such as bit depth and sample rate. The web radio player uses AI to easily find and filter radio stations by region, genre, tags, and preferences. This means one can easily find the best matching and best sounding music services, playlists, stations, or podcasts - for a better and more satisfying every-day listening experience.

### **Ready for Lyngdorf Audio and Steinway & Sons systems**

The new apps will control several products and adapt to their feature set:

Lyngdorf TDAI-1120, TDAI-2210, TDAI-3400, MP-40, MP-50, MP-60  
Steinway & Sons P100, P200, P300, Head Unit

The My Lyngdorf app and My Steinway Lyngdorf app are available in app stores now.
